

Intelligence Analysis for Environmental Regulators training course

Call for nominations

The Commonwealth Department of the Environment and Energy, in collaboration with the National Centre for Intelligence Training and Education (NCITE), is pleased to confirm that the inaugural **Intelligence Analysis for Environmental Regulators** training program will be held in Canberra over **13-15 November 2018**.

We are now officially calling for nominations to attend this program.

About the course

The program is designed exclusively for members of the AELERT Intelligence Community of Practice. This is a unique opportunity to be involved in an intelligence training course tailored towards the analysis of problems in environmental regulation.

The course, delivered by experienced intelligence professionals from Analytic Advantage (www.analytic-advantage.com), will cover:

- an introduction to intelligence and the intelligence cycle
- key elements of critical thinking
- inference development
- writing and presenting intelligence findings
- tactical, contrarian and strategic analytical techniques (e.g. Analysis of Competing Hypotheses and Key Assumptions Checks).

The content is designed to be suitable for beginners, but will be relevant to intelligence staff at all levels of experience. Case studies will be tailored toward environmental issues, and the program will conclude with a one-day scenario based exercise.

Please note the course will be delivered at the UNCLASSIFIED level. As such, a security clearance is not required.

Costs

The Department of the Environment and Energy has covered the costs of the course delivery, including venue hire and catering. However, the costs of travel to Canberra and accommodation are to be covered by each participating agency.

How to nominate

Please email all nominations from your agency, in priority order, to intelligence@environment.gov.au by **COB Friday, 5 October 2018** including the participant's full name, position title and email address.

For Official Use Only
